

Europe Excellence Awards

Q4 FY 25-26

Rising Star Award (B2 Below)

Debanjan Mukherjee

NOVARTIS

Debanjan successfully delivered two major initiatives with complete accuracy and zero downtime. He designed and implemented a .NET WebAPI-based automated migration solution that seamlessly migrated approximately 10,200 inventory host and schedule records from the legacy Ansible Tower domain to the new AAP domain. In parallel, he led the upgrade of the INPAT application from Angular 6 to Angular 18 within a month, requiring extensive refactoring and careful dependency alignment. Despite the complexity, the upgrade cleared all environment validations and significantly enhanced the application's reliability, scalability, and long-term maintainability.

Thank You
